For x = 123.456789, print:

- it's integer part

- it's decimal part using:

    - scientific notation with 3-digits precision
    - float notation with 3 decimals
    - percentage with 2 decimals

All strings must be right-aligned, be 10 characters length and padded with '_'.

Print them using a single `print` statement, one string per line.
